

PLASTER MIX

Micro Milling Plaster Mix is a blend of cement, graded sand and special additives.

Features:

- Ideal for plastering walls, brick laying, stonework and patching damaged mortar.
- Specially formulated for improved adhesion and bond strength.
- Interior and exterior use.
- Lasting durability.
- Easier to carry (portability) and manage during use makes it Ideal for minor repairs and small projects in high rise buildings and condominiums.
- Ready to use premixed format removes guesswork for DIYers – Just add Water.
- Manufactured to ensure consistency– (Graded sand allows for smooth consistent finish).
- Eliminates site batching risk and storage of different material components.
- Streamlines and improves building progress, producing more plaster in less time and reducing overall job times.
- Efficient alternative to onsite mixing (less wastage) and prevents unsightly material residue on project completion.
- When cured, can accept most commercial finishes including paint, wallpaper, ceramic and porcelain tile, stone, marble and mosaics.

Available in 22.7 kg./ 50 lbs size

Coverage

One bag (22.7 kg. / 50 lbs.) will cover approximately 10-12 square feet at a thickness of $\frac{3}{8}$ " (9.5mm).

TECHNICAL FEATURES			
	Water required: 5.3 US Qts/ 5 litres		
PLASTERING	$\frac{1}{4}$ " (6.4 mm) thickness Approx: 20-21 ft ²	$\frac{3}{8}$ " (9.5 mm) thickness Approx: 15 -16 ft ²	$\frac{1}{2}$ " (12.7 mm) thickness Approx: 10 -12 ft ²
BRICK/BLOCK LAYING	4x8x12" Approx 18-20	4x8x16" Approx 16	6x8x16" Approx 10
