

CONCRETE MIX

Micro Milling Concrete Mix is a blend of Sand, fine aggregates and cement used for repairing concrete and constructing foundations.

Features:

- Ideal for setting posts, anchoring poles, casting driveways, walkways and steps.
- Repairs structural concrete removed during renovations or installing utility lines in residential and commercial buildings.
- High Compressive Strength; 4000 psi after 28 day cure.
- Easy to use- Just add water.
- Measured proportions of cement and aggregates ensure consistent strength and integrity.
- Shortens job times and reduces equipment and labour requirements in most projects.
- Ideal for minor localized repairs in high rise buildings condominiums and confined, enclosed areas.
- Easier onsite storage helps ensure compliance with building occupational safety and health requirements.
- Eliminates stock of residual materials left onsite after project completion.
- Exact yield of 0.4 cu ft of concrete per bag removes the need for guessing the required materials by novices and DIYers.

Available in 22.7 kg./ 50 lbs size
