

OUR COMPANY

Our initial venture started off in 1974 with a sand processing business. With 20 years experience in the sand business and assistance from European experts the business successfully progressed into sand/cement blends and so Micro Milling Ltd. was formed in 1995. Since its inception Micro Milling has been dedicated to research, testing and continuous improvement in developing its product range and manufacturing processes.

Micro Milling is family owned and managed through a capable management team that takes a hands-on approach to operations and is dedicated to providing quality products and service to all our customers. It is this focus on quality that has enabled us to become a leading manufacturer of cementitious tile adhesives for use in the construction sector across the region.

In this regard we have expanded and continue to expand our capacity in anticipation of further growth across the region and to service our existing customers in Trinidad and Tobago, Guyana, Suriname, Barbados and the Eastern Caribbean.

Our Products include:

- Regular Thin Set (ANSI A118.1) for Ceramic tile.
- Premium 2600 Thin Set (ANSI A118.4) for Porcelain tile in specified conditions and substrates.
- Premium 3600 Thin Set (ANSI A118.4) for Porcelain tile on a wide array of conditions and substrates.
- Premium LFT Thin Set (ANSI A118.4) for larger, heavier tiles and stone above 24" x 24".
